

LADDER SAFETY TIPS

- Avoid climbing any higher than the third rung from the top.
- If using a ladder in a windy area, be sure to tie it to something secure before use.
- Set your ladder at a slope of around 4 in 1 for optimal comfort and security.
- Always have three limbs in contact with your ladder at all times.

YOUR CHOICE OF MATERIALS

Our aluminium ladders are super strong, yet lightweight enough to be highly portable and versatile.

They're perfect for tradesmen to use confidently. There is also a range of nonconducting fibreglass ladders to choose from – perfect for any job where you're working near power lines or electrical outputs.
