

JBS BY METRINCH

The Metrinch system means each tool can be used for both metric and inch fasteners, without the hassle of switching back and forth all the time. One tool does it all. And fewer tools makes for a lighter toolbox – and a heavier wallet, too.

Unlike traditional sockets and spanners, which only have a 2-point grip, JBS by Metrinch sockets also have a unique 6-wall-drive patented design technology, which puts pressure on the flat of the nut or bolt instead of the corners. With their 4-point grip, one socket will grip bolts or nuts of different sizes, saving valuable time. And with less torque pressure, there's also less wear and distortion. It all adds up to greater grip with less effort – even on damaged, rounded off nuts.
