

TIPS FOR CORRECT VALVE SELECTION

- Matching valve and piping material.
- System requirements – open/close or throttle etc.
- Consideration if valve is to be used for potable water.
- Flow Pressure and Temperature parameters.
- Compatibility of components and flow media.
- Space restrictions.
- Quality and reliable brands.
- Important to meet all statutory regulations.
- Standards Australia , Water Mark, AGA common regulators.
- Refer to any manufacturers data ie Pressure Temperature Charts.
